

## **Building a Website in 60 Minutes or Less**

This presentation will enable you to build a basic website using an online platform wix.com. You are encouraged to bring your laptop to this workshop; the platform does not support iPad or Tablet devices.

### **Description:**

“I need a website! I have been needing one for years, but don’t know where to start.”  
If you relate to this statement and would like to build your own website – this session is for you!

Bring your laptop and we will begin to building your website together. In just sixty minutes we will be able to construct a basic website, that you will be able to maintain, expand and modify as needed. The platform that I will introduce in this session is [www.wix.com](http://www.wix.com). By using Wix, we will be able to easily create a beautiful website choosing from hundreds of offered templates, at absolutely no cost.

The free version will include ‘wix’ advertisement both in the name and on the pages; however, it will be fully functional and operative. Once ready to upgrade to a customized name, the cost will be two fold. The expense of the website’s name (\$0.99 a month) and the cost of using wix.com as website platform (\$5-\$25 a month). Both of these expenses, however, do not have to materialize until financially ready to invest or/and until the website is completed to your satisfaction.

While building a website might seem intimidating, this session will aim on elevating the “unknown” and providing practical steps to have an active website by the end of the hour.

Note: the building platform does not support iPad or Tablet devices.
